IDH Background

1 Bangkok metropolitan area has been growing exponentially from a population of 1.6 million in 1986 to 5.7 million in 2019, converting the city not only into the biggest urban center of Thailand, but also one of the world's largest megacities

2 Large metropolitan areas need to be able to rapidly respond to a changing environment, while being able to deliver better services, be responsive to emerging crises whilst keeping pace with change, accomplish more with less resources and, be more transparent whilst protecting the privacy of its citizens

3 A significant amount of data is currently collected and used by departments within BMA, but there is insufficient coordination among them, and an absence of a centralised system that allows data consistency, reliability and quality

4 A centralised repository such as that enabled by an Integrated Data Hub (IDH) will enhance decision-making and lead to better quality analysis, considered critical to strengthening data monitoring systems, along with enabling coordination and data reliability

5 The Global Future Cities Programme will support BMA in designing and developing a roadmap for implementation of a world-class integrated data hub shaped to the specific requirements of Bangkok

IDH Conclusion

We understood the Challenges 	We assessed Current State 	We identified Future Needs 	We propose Integrate Data Hub 
<ul style="list-style-type: none">• Bangkok metropolitan area has been growing exponentially and BMA must respond rapidly to a changing environment for sustainable development• A lot of data is collected by different departments of BMA but it resides in siloes• A centralised data repository is required to support effective decision making and integrated planning	<ul style="list-style-type: none">• The current Data Analytics maturity score of BMA is relatively low 1.9 on a 1-5 scale• The maturity assessment dimensions include Capability, Governance, People, Applications & Technology, and Data• This maturity assessment is based on a study performed through 32 workshops and 16 interviews. Total 164 stakeholders were consulted. 85 questionnaires were filled and more than 450 observations were generated	<ul style="list-style-type: none">• 89 use cases were identified with a focus around sustainable development goals• 13 of these use cases are at overall organisation level, 25 at inter-department and 51 are aligned to specific departments• 61 of these use cases address more than 3 SDGs each• Key development goals that are in focus include:<ul style="list-style-type: none">• SDG 11: Sustainable cities and communities• SDG 3: Good health and well-being• SDG 9: Industry, innovation and infrastructure• SDG 8: Decent work and economic growth• SDG 15: Life on land	<ul style="list-style-type: none">• An integrated data hub is expected to provide consolidated, clean and harmonised data• It should provide users an easy, quick and secure access to enable them to build identified use cases• It is based on high performing, robust, secure, flexible and scalable architecture• It is enabled through a strong Data and Analytics Organisation• It is driven by streamlined Data Governance and Data Management process

IDH for BMA

Technological and operational foundation, that matches the need of BMA to establish IDH in future, needs to be laid down

IDH will provide access to detailed, accurate and up-to-date data which is shared among departments, as well as with other external agencies/ universities/ stakeholders, that will be used in policy analysis and planning processes

IDH will then contribute significantly to the overall goal of "making Bangkok inclusive, safe, resilient and sustainable"

IDH Report

Integrated Data Hub Framework : BMA

The integrated data hub is expected to provide consolidated, clean and harmonised data to users in an easy, quick and secure manner. It will enable users to build the identified and future use cases

Encompasses the overall management and facilitation of the data ecosystem from a technical, business and data governance perspective

The conceptual architecture has been tailored to fit in-line with IDH business and technical requirements that support all kind of data such as structured, semi-structured, un-structured (image, voice, free text etc.)

With security as a touchstone principle, the system will be managed around restricted access zone (highly sensitive), quarantine zone (sensitive) and processing & publishing zone (non-sensitive)

The system has been designed to be robust, high performing, flexible and scalable to meet BMA's needs

BMA Open Data Platform : <http://data.bangkok.go.th/>

The screenshot shows the BMA Open Data Platform interface. At the top, there is a navigation bar with the BMA logo and menu items: "ข้อมูล", "องค์กร", "กลุ่ม", "เกี่ยวกับ", and a search box labeled "ค้นหา". Below the navigation bar, there is a large featured article on the left and a "ค้นหาชุดข้อมูล" (Search for datasets) section on the right. The featured article is titled "กรุงเทพฯ หรือ บางกอก เมืองหลวงของประเทศไทยเริ่มก่อตั้งภายหลังจากที่พระบาทสมเด็จพระพุทธยอดฟ้าจุฬาโลกมหาราชทรงพระราชดำริโปรดเกล้าฯ ให้สร้างพระราชวังทางฝั่งแม่น้ำเจ้าพระยา..." and includes an image of the Grand Palace. The search section shows a search bar with the text "E.g. environment" and a list of popular tags: "ประชากร", "ตัวชี้วัดการพัฒนา...", and "เศรษฐกิจ". Below the search section, there is a summary of "Open Government Data of Bangkok สถิติ" with the following data: 431 ชุดข้อมูล, 95 องค์กร, and 16 กลุ่ม.

กรุงเทพฯ หรือ บางกอก เมืองหลวงของประเทศไทยเริ่มก่อตั้งภายหลังจากที่พระบาทสมเด็จพระพุทธยอดฟ้าจุฬาโลกมหาราชทรงพระราชดำริโปรดเกล้าฯ ให้สร้างพระราชวังทางฝั่งแม่น้ำเจ้าพระยา...
